

Chapter 7

Physical
Science

Electricity

Physical Science Vocabulary**Vocabulary for Chapter 7 – Electricity**

Vocabulary Word	Definition
1. Charging by Contact	
2. Charging by Induction	
3. Circuit	
4. Conductor	
5. Electric Current	
6. Electric Power	
7. Insulator	
8. Law of Conservation of Charge	
9. Ohm's Law	
10. Parallel Circuit	
11. Resistance	
12. Series Circuit	
13. Static Electricity	
14. Voltage Difference	+

Note-Taking "Electricity"

Section 1: - Electric Charge

- A. Protons have _____ electric charge; electrons have _____ electric charge.
 1. In most atoms, the charges of the protons and electrons cancel each other out and the atom has no _____.
 2. Atoms become charged by gaining or losing _____.
 3. **Static electricity** – the accumulation of excess _____ on an object.
- B. Electrically charged objects obey the following rules:
 1. **Law conservation of charge** – charge may be transferred from object to object, but it cannot be _____ or _____.
 2. Opposite charges _____, and like charges _____.
 3. Charges can act on each other even at a _____, because any charge that is placed an **electric field** will be pushed or pulled by the field.
 4. Electrons move more easily through **conductors**, like _____.
 5. Electrons do not move easily through _____, such as plastic, wood, rubber, and glass.
- C. Transferring electric charge
 1. Charging by _____
 - a. The process of transferring charge by _____ or _____.
 - b. Example: static electricity from your feet _____ the carpet.
 2. Charging by _____
 - a. The rearrangement of electrons on a neutral object caused by a nearby _____ object.
 - b. Example: a negatively charged balloon near your sleeve causes an area of your sleeve to become _____ charged.
 3. Static _____
 - a. A transfer of charge through the _____ between two objects because of a buildup of static electricity.
 - b. Example: _____.
 4. **Grounding** – using a _____ to direct an electric charge into the ground.
- D. The presence of electric charges can be detected by an _____.

What is an Electroscope?

Section 2: - Electric Current

- A. The flow of charges through a wire or conductor is called **electric** _____.
1. Current is usually the flow of _____.
 2. Electric current is measured in _____ (A).
 3. Charges flow from _____ voltage to _____ voltage.
 - a. A **voltage difference** is the _____ that causes charges to move.
 - b. Voltage difference is measured in _____ (V).
 4. For charges to flow, the wire must always be connected in a closed path, or _____.
- B. Sources of electricity:
1. A _____ battery produces a voltage difference between its zinc container and its carbon suspension rod, causing current to flow between them.
 2. A _____ battery contains two connected plates made of different metals in a conducting solution.
 3. _____ have voltage difference across the two holes of an electrical outlet, and a generator at a power plant provides the voltage difference.
- C. Resistance – the tendency for a material to oppose the flow of electrons, changing electrical energy into _____ energy and _____.
1. All _____ materials _____ have _____ some _____ electrical _____.
 2. Resistance is measured in _____ (Ω).
 3. Making wires thinner, longer, or hotter _____ the resistance.
- D. Ohm's Law – the current in a circuit equals the voltage difference divided by the _____.

Section 3: - Electric Circuits

- A. Circuits rely on generators at power plants to produce a voltage difference across the outlet, causing the charge to _____ when the circuit is complete.
1. Series circuit – the current has only one _____ to flow through.
 - a. The parts of a series circuit are wired one after another, so the amount of current is the _____ through every part.
 - b. _____ - if any part of a series circuit is disconnected, no current flows through the circuit.
 - c. Example: strings of _____.
 2. **Parallel circuit** – contains two or more _____ for current to move through.
 - a. Individual parts can be _____ without affecting the entire circuit.
 - b. Example: the electrical system in a _____.

What's wrong with this electrical outlet?

Section 3: - Electric Circuits

- B. Household circuits use _____ circuits connected in a logical network.
- Each branch receives the standard _____ from the electric company.
 - Electrical energy enters your home at the _____ breaker or _____ box and branches out to wall sockets, major appliances, and lights.
 - Guards against overheating electric wires:
 - _____ - contains a small piece of metal that melts if the current becomes too high, opening the circuit and stopping the flow of current.
 - _____ - contains a small piece of metal that bends when it gets hot, opening the circuit and stopping the flow of current.
- C. Electrical energy is easily converted to mechanical, thermal, or _____ energy.
- Electrical power** – the rate at which _____ energy is converted to another form of energy.
 - Electrical power is expressed in _____ (W).
 - Power = current X _____.
 - $P \text{ (watts)} = I \text{ (amperes)} \times \text{_____}$.
 - To calculate the amount of energy an appliance uses:
 - The unit of electrical energy is the _____, which equals 1000 watts of power used for one hour.
 - Energy = power X _____.
 - $E \text{ (kWh)} = P \text{ (kW)} \times \text{_____}$.

"Find your way to the water?"

Section 4 – Static Electricity

In the diagram below show the positive and negative particles in the balloon and the girl's hair after they are rubbed together.

1. The flow of electrons: _____.
2. When an object is positively charged it has more _____ than _____.
3. When an object is negatively charged it has more _____ than _____.
4. When two objects, each having more electrons than protons, are brought close to each other, they will _____ each other.

Write the word or phrase from column B in the space below before its description in column A.

	Column A	Column B
_____	a. Electrical charges at rest	Static
_____	b. Objects having more + than - charges	Neutron
_____	c. Produces a form of electricity	Positively charged
_____	d. No positive or negative electrical charge	Negatively charged
_____	e. Objects having more - than + charges	Friction

5. Identify the following as: Positive (+), Negative (-), or Neutral (0)

- _____ Is attracted to an electron.
- _____ Most objects we encounter.
- _____ An object that has 514 electrons and 275 protons.
- _____ Something that is repelled by an object that has gained electrons.
- _____ Will not attract or repel anything.
- _____ An object with 5 more protons than electrons.
- _____ An object that will take electrons from the earth when it is grounded.

Calculate the total charge in each circle.

Positive Charges (+) =
 Negative Charges (-) =
 Net Charges = _____

Positive Charges (+) =
 Negative Charges (-) =
 Net Charges = _____

Positive Charges (+) =
 Negative Charges (-) =
 Net Charges = _____

Positive Charges (+) =
 Negative Charges (-) =
 Net Charges = _____

Section 5 – Ohm's Law

Complete the following memory circle **AND** the chart below.

	Letter stands for	Units
V		
I		
R		

1. What voltage produces a current of 50.0 amps with a resistance of 20 Ω ?

Formula	Set Up & Solve	Answer

2. What is the current produced with a 9-V battery through a resistance of 100 Ω ?

Formula	Set Up & Solve	Answer

3. What resistance would produce a current of 200 A with a potential difference of 2000 Volts?

Formula	Set Up & Solve	Answer

4. A 12-Volt battery produces a current of 25 A (amperes). What is the resistance?

Formula	Set Up & Solve	Answer

5. Silver has a resistance of 0.00198 Ω . What voltage would produce a current 100 amps (amperes)?

Formula	Set Up & Solve	Answer

Section 5 – Ohm's Law

6. What voltage produces a current of 150.0 amps with a resistance of 2.0Ω ?

Formula	Set Up & Solve	Answer

7. What is the current produced with a 9-V battery through a resistance of $1,000\Omega$?

Formula	Set Up & Solve	Answer

8. What resistance would produce a current of 250 A with a potential difference of 24,000 Volts?

Formula	Set Up & Solve	Answer

9. A 12-Volt battery produces a current of 35 A (amperes). What is the resistance?

Formula	Set Up & Solve	Answer

10. Silver has a resistance of 0.00198Ω . What voltage would produce a current 150 amps (amperes)?

Formula	Set Up & Solve	Answer

Section 6 - Electricity Problems

E = Volts
I = Amps
R = Resistance

1. A circuit has a resistance of 4Ω . What voltage difference will cause a current of 1.4A to flow in the circuit?

Formula	Set Up & Solve	Answer

2. How many amperes of current will flow in a circuit if the voltage difference is 9V and the resistance in the circuit is 3Ω ?

Formula	Set Up & Solve	Answer

3. If the voltage difference of 3V causes a 1.5A current to flow in a circuit, what is the resistance in the circuit?

Formula	Set Up & Solve	Answer

4. The circuit in an appliance is 3A and the voltage difference is 120V. How much power is being supplied to the appliance?

Formula	Set Up & Solve	Answer

5. What is the current into a microwave oven that requires 700W of power if the voltage difference is 120V?

Formula	Set Up & Solve	Answer

6. What is the voltage difference in a circuit that uses 2420 W of power if 11A of current flows into the circuit?

Formula	Set Up & Solve	Answer

Section 6 - Electricity Problems

7. How much energy is used when an 110kW appliance is used for 3 hours?

Formula	Set Up & Solve	Answer

8. What is the resistance of a light bulb that draws 0.5 amps of current when plugged into a 120-V outlet?

Formula	Set Up & Solve	Answer

9. A circuit has a resistance of 6Ω . What voltage difference will cause a current of 2.1 A to flow in the circuit?

Formula	Set Up & Solve	Answer

10. How many amperes of current will flow in a circuit if the voltage difference is 5V and the resistance in the circuit is 2Ω ?

Formula	Set Up & Solve	Answer

11. The circuit in an appliance is 7A and the voltage difference is 120V. How much power is being supplied to the appliance?

Formula	Set Up & Solve	Answer

12. What is the current into a microwave oven that requires 700W of power if the voltage difference is 120V?

Formula	Set Up & Solve	Answer

What type of aquatic organism generates electricity?

.....

Section 6 - Electricity Problems

13. What is the voltage difference in a circuit that uses 2,420 W of power if 11A of current flows into the circuit?

Formula	Set Up & Solve	Answer

14. A microwave oven with a power rating of 1,200 Watts is used for 0.25 hours. How much electrical energy does the microwave use?

Formula	Set Up & Solve	Answer

15. The current in an electric clothes dryer is 15A when it is plugged into a 240-volt outlet. How much power does the clothes dryer use?

Formula	Set Up & Solve	Answer

16. A toaster oven is plugged into an outlet that provides a voltage difference of 120V. What power does the oven use if the current is 10A?

Formula	Set Up & Solve	Answer

17. A flashlight bulb uses 2.4 W of power when the current in the bulb is 0.8A. What is the voltage difference?

Formula	Set Up & Solve	Answer

How much electrical energy does a vending Machine use?

Copyright © Ron Leishman - <http://TeenClips.com/8806>

Section 7: Multiple Choices

18. _____ Of the following materials which would be the best choice for insulating copper wire?
 a. Aluminum foil
 b. Salt water
 c. glass
 d. silicon
19. _____ If you have an electrical circuit made of copper, which material below would make a good heating element?
 a. Pure water
 b. Glass
 c. silver
 d. iron
20. _____ Which of the following is not a voltage source?
 a. Battery
 b. Gasoline
 c. solar cell
 d. generator
21. _____ A static discharge differs from an electric current in that a static discharge _____.
 a. Involves the movement of ions as well as electrons
 b. Is a flow of electrons
 c. Lasts for only a fraction of a second
 d. Results because a force is exerted on the electrons
22. _____ A material through which electrons **DO NOT** easily flow is a (n) _____.
 a. Conductor
 b. Fuse
 c. insulator
 d. transformer
23. _____ If the leaves of an electroscope spread apart, it indicates that _____.
 e. The leaves of the electroscope are neutral
 f. The leaves of the electroscope have received a charge
 g. No charge is moving through the electroscope
 h. There is static electricity in the electroscope
24. _____ Lighting is _____.
 a. A buildup of neutrons
 b. Harmless
 c. a high-voltage electric current
 d. a large discharge of static electricity
25. _____ In the equation for Ohm's law, what does "I" represent?
 a. impedance
 b. resistance
 c. impulse
 d. current

Color the picture below.

Use a different color crayon for each number.

Section 8: Matching

Matching Answer 26-30 using a – e below.

26. _____ Parallel Circuit
 27. _____ Semiconductor
 28. _____ Ohm's Law
 29. _____ Conductor
 30. _____ Series Circuit

- a. is a material with conductivity between a conductor and an insulator
 b. Circuits that have closed conducting loops that have at least one voltage source and one resistor
 c. A material through which electric charges can't easily flow
 d. States that the voltage is proportional to the current and that this relationship can be expressed by a constant called resistance
 e. Circuit in which a simple circuit is split into more than one loop with circuit elements on each path

Section 9 Completion

Figure 7-1

Circuit A

Circuit B

31. In Figure 7-1, circuit _____ is wired in series.
 32. In Figure 7-1, circuit _____ is wired in parallel.
 33. In Figure 7-1, circuit _____ represents the way homes are usually wired so that when one part of the circuit is interrupted the entire circuit is not broken.
 34. In Figure 7-1, circuit _____ is the type of circuit that causes an entire string of decorative lights to go out when one of the bulbs burns out.

Section 10: Completion

Measurement	Unit	Symbol
35.	Ohm	
36.		kWh
37. Electrical power		
38. Voltage difference		
39.	Amperes	

40. Calculate the resistance between points A and B (R_{AB}) for the following resistor networks:

Figure 1: $R_{AB} = 500 \Omega$ Figure 4: $R_{AB} = 940 \Omega$

Figure 2: $R_{AB} = 750 \Omega$ Figure 5: $R_{AB} = 880 \Omega$

Figure 3: $R_{AB} = 1.511 \text{ k}\Omega$ Figure 6: $R_{AB} = 80.54 \Omega$

41. What is the current flowing through this circuit?

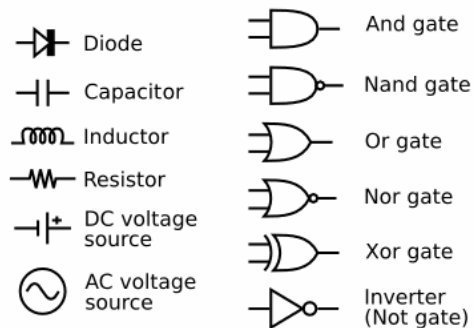

42. What is the power consumed by the light bulb in this circuit?

43. The illustration shows a _____.

- a. broken circuit
- b. open circuit
- c. parallel circuit
- d. series circuit

$$R_{\text{total}} = \frac{1}{\frac{1}{R_1} + \frac{1}{R_2} + \frac{1}{R_3}}$$

$$I_T = I_1 = I_2 = I_3 = \dots$$

Quantity	Symbol	Unit of Measurement	Unit Abbreviation
Current	I	Ampere ("Amp")	A
Voltage	E or V	Volt	V
Resistance	R	Ohm	Ω

Section 10: Completion

44. The total current flow in this circuit is _____.

- 0.52 A
- 0.96 A
- A
- 1.9 A

Find the Following Words

- ampere - measure of current
- amplifier - signal booster
- battery - storage device
- diode - lets current flow only in one direction
- Edison - famed inventor
- franklin - he used a kite to demonstrate that lightning is a form of electricity
- frequency - measure of the rate of oscillation in alternating currents
- generator - electrical power maker
- laser - device that generates an extremely narrow light beam
- Marconi - inventor who first demonstrated wireless communication
- microphone - converts sound to electricity
- microwave - form of energy used in a common kitchen appliance
- nuclear - controversial way of producing electricity
- ohms - measure of electrical resistance
- rheostat - electrical control device
- speaker - converts electricity to sound
- switch - on-off device
- transformer - device used to change current or voltage in ac circuits
- transistor - miniature marvel of electronics
- vacuum tube - old device used in radio, tv, etc., now obsolete
- voltage - measure of electrical potential
- watt - Scottish inventor whose name is used as a measure of power

Broughton High School of Wake County

Part I. Solve all of the following problems using Ohm's Law and your Power Equation

23. A circuit has a resistance of 35Ω . What voltage difference will cause a current of 2.5 A to flow in the circuit?

Formula	Set Up & Solve	Answer

24. How many amperes of current will flow in a circuit if the voltage difference is 6V and the resistance in the circuit is 12Ω ?

Formula	Set Up & Solve	Answer

25. The circuit in an appliance is 8A and the voltage difference is 120V . How much power is being supplied to the appliance?

Formula	Set Up & Solve	Answer

26. What is the current into a microwave oven that requires $5,100\text{W}$ of power if the voltage difference is 120V ?

Formula	Set Up & Solve	Answer

27. What is the voltage difference in a circuit that uses $2,420\text{ W}$ of power if 12A of current flows into the circuit?

Formula	Set Up & Solve	Answer

28. What is the voltage in a dryer if the dryer uses $4,250\text{ W}$ of power when plugged into a 22.0-A wall outlet?

Formula	Set Up & Solve	Answer

Broughton High School of Wake County

29. What is the current in a toaster if the toaster uses 7,500 W of power when plugged into a 110-V wall outlet?

Formula	Set Up & Solve	Answer

30. A series circuit has a current of 13A. The circuit contains a 150 Ω resistor. What is the voltage of the circuit?

Formula	Set Up & Solve	Answer

31. This diagram represents a closed circuit. How much current flows through this circuit?

32. A flashlight bulb connected to a 6-V battery draws a 0.35 –A current. What is the power used by the flashlight bulb?

Formula	Set Up & Solve	Answer

33. A light bulb with a resistance of 50 ohms is plugged into a 120-volt outlet. . What is the current flowing through the bulb?

Formula	Set Up & Solve	Answer

What field of science are these people possibly studying?

Broughton High School of Wake County

34. A motor has a current of 4A flowing through it when it is powered with a 12-V battery. What is the power used by the motor?

Formula	Set Up & Solve	Answer

35. A series circuit has a 6-V battery and 2 ohms of resistance. How much current will flow through the circuit? _____.

Formula	Set Up & Solve	Answer

36. What voltage is required to run a 45-watt light bulb if the current is 0.9 ampere?

Formula	Set Up & Solve	Answer

37. How much current is used by a 120-V refrigerator that uses 750 W of power?

Formula	Set Up & Solve	Answer

Part II. Answer the following questions about Circuits

38. A path that allows only one route for an electric current is called a _____.

Circuit A

Circuit B

- 39. Circuit _____ is wired in series.
- 40. Circuit _____ is wired in parallel.
- 41. Circuit _____ represents the way homes are usually wired so that when one part of the circuit is interrupted the entire circuit is not broken.
- 42. Circuit _____ is the type of circuit that causes an entire string of decorative lights to go out when one of the bulbs burns out.
- 43. This diagram represents a closed circuit with three light bulbs and a 10 Volt battery. If bulb #3 burns out in the circuit, what will most likely happen?

44. Which is the correct diagram for a parallel circuit with three light bulbs powered by a 24-V battery?

Broughton High School of Wake County

45. The diagrams represent two complete circuits. A 9-V battery is connected to two light bulbs as shown.

Circuit A

Circuit B

46. Which statement *best* describes what will happen?

- the light from circuit B will be dimmer because each light bulb must share its current with the other light bulb
- the light from circuit A will be brighter because each light bulb adds its current to the other light bulb
- the light from circuit B will be brighter because each light bulb has a direct path to both poles of the battery
- The light from Circuit A will be dimmer because each light bulb has a direct path to both poles of the battery.

47. Which *best* describes a circuit is series?

- electrons have only one path at all times
- current values are different at various points in the circuit.
- electrons may take several paths.
- different parts are on separate branches.

48. Which statement is true about parallel circuits?

- they cease to function when one part of the circuit is disconnected.
- they are usually called open circuits.
- they provide one path through which current can flow.
- they contain separate branches through which current can flow

49. Which of the following **DOES NOT** provide a voltage or potential difference in a circuit?

- wet cell
- electrical outlet
- wires
- dry cell or battery

50. Resistance in wires causes electrical energy to be converted into which form of energy?

- chemical energy
- nuclear energy
- sound
- thermal energy

51. One source of constant electric current is a _.

- transformer
- dry cell (battery)
- switch
- coulomb

52. Which of the following is a device designed to open an overloaded circuit and prevent overheating _____. a. circuit breaker

- resistor
- magnet
- transformer

53. Current that does **not** reverse direction is called _____.

- alternating current
- a fused current
- circuit current
- direct current

54. Currents that reverse direction in a regular pattern is called _____.

- alternating current
- direct current
- circuit current
- magnetic current

Broughton High School of Wake County

Part III Answer the following questions about Electromagnets

55. A student performed an experiment to determine the number of paper clips that are attracted to an electromagnet as the amount of current changes.

Data Table

Current	Number of Paper Clips
5 A	20
10 A	40
15 A	60
20 A	80

56. Which graph *best* describes the relationship between magnetism and electrical current?

57. A magnet is moved back and forth through a loop of wire as shown below. What will happen as the magnet is moved back and forth as shown?

- a. the wire will attract the magnet
 b. the magnet will attract the wire
 c. the galvanometer needle will move back and forth
 d. the galvanometer needle will be on 0.
58. A student coiled wire around a nail, attached both ends to a 2.5-V battery, and attempted to lift paper clips with the nail. What is a valid conclusion for this investigation?

Results

Number of Turns of Wire	Paper Clips Picked Up
10	2
20	4
30	10
40	20

- a. increasing voltage increases electromagnetic strength
 b. increasing the number of turns of wire decreases the electromagnetic strength
 c. increasing the number of turns of wire has no effect on electromagnetic strength
 d. increasing the number of turns of wire increases the electromagnetic strength

Part IV Answer the following questions about Static Electricity and Charges

59. If the leaves of an electroscope spread apart, it indicates that _____.
60. Electric charge that has accumulated on an object is referred to as _____.
61. A static discharge differs from an electric current in that a static discharge _____.
62. The diagram shows a negatively charged balloon. When the balloon is brought near some paper, the papers are attracted to the balloon by means of _____ and become _____.

63. When a plastic rod is rubbed with fur, the plastic rod becomes _____ charged. Electrons are transferred from the _____ to the _____.
64. How do electrically charged objects affect neutral objects when they come in contact?
- Protons move from negatively charged objects to neutral objects
 - Protons move from neutral objects to negatively charged objects
 - Electrons move from positively charged objects to neutral objects
 - Electrons move from neutral objects to positively charged objects
65. Lighting is a large _____.
66. The electric force between two charged objects depends on which of the following?
- their masses and their distance of separation
 - their speeds
 - their charge and their distance of separation
 - their masses and their charge
67. An object becomes positively charged when it _____.
68. The drawing shows two uncharged lightweight plastic balls suspended by thin, insulating threads. Ball 1 is given a positive charge. Ball 2 is given an equivalent negative charge.

69. Which diagram *best* shows how the balls will react after becoming charged?

Broughton High School of Wake County

70. Which statement BEST explains why there could be a force of attraction between two electrically charged objects?
- a. because they have like charges
 b. because they have unlike charges
 c. because they have the same number of electrons
 d. because they have the same number of protons

71. The diagram shows two copper spheres. Sphere 1 is negatively charged, and Sphere 2 is neutral. What will be the result when the two spheres touch?

Sphere 1

Sphere 2

- a. sphere 1 will become positively charged
 b. sphere 2 will become positively charged
 c. both spheres will become negatively charged equal to the initial charge of sphere 1
 d. both spheres will become negatively charged less than the initial charge of sphere 1.

Part V Answer the following questions about Magnetism

72. The location of the strongest magnetic forces is the _____.
73. Objects that keep their magnetic properties for a long time are called _____.
74. The atoms in a magnet are _____.
75. Which magnetic pole is located in Northern Canada? _____
76. A sheet of paper is positioned to completely cover a bar magnet. Iron filings are then gently sprinkled on the paper.

47. How could 3 magnets be arranged end-to-end so that there will be no attraction between them? Make a sketch.

Which Magnet is stronger?
